Sequence 13, Application US/09009217

Patent No. 6132729
GENERAL INFORMATION:
APPLICANT: Thorpe, Philip E.
APPLICANT: King, Steven W.
APPLICANT: Gao, Boning
TITLE OF INVENTION: COMBINED TISSUE FACTOR AND
TITLE OF INVENTION: CHEMOTHERAPEUTIC METHODS AND COMPOSITIONS FOR COAGULATION
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, white & Durkee
                                                                                                                                                                                                                                                                                                          440 TICAATIGICITITAICIGICGAGACTIGCITIGITITIGAAATAIGIATICAATITIGG 498

US-09-003-656-13

US-09-003-656-13

Sequence 13, Application US/09009656

Patent No. 6132730

GENERAL INFORMATION:
APPLICANT: Thorpe, Philip E.
APPLICANT: Thorpe, Philip E.
APPLICANT: Gao, Boning
TITLE OF INVENTION: COMBINED TISSUE FACTOR AND FACTOR VIIA
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR COAGULATION AND TUMOR TITLE OF INVENTION: TREATMENT:
NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:
ADDRESSE: Arnold, White & Durkee
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB 1; Length 1440;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1761 TCCTTTGGTTTTTGCATAGTGTCTCTGGCTTCCTGGATG 1799

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-272-756-106

Sequence 106, Application US/10272756

Publication No. US20030190644A1

GENERAL INFORMATION:
APPLICANT: Braun et al.

TILLE OF INVENTION: METHODS FOR GENERATING DATABASES AND DATABASES FOR IDENTIFYING PC

TITLE OF INVENTION: GENETIC MARKERS.
TITLE OF INVENTION: GENETIC MARKERS.

TITLE OF INVENTION: GENETIC MARKERS.

CURRENT APPLICATION NUMBER: US/10/272,756

CURRENT PILING DATE: 2000-07-10

PRIOR FILING DATE: 2000-07-10

PRIOR PELICATION NUMBER: 60/117,658
